

Instructions for Installing a TV Standby Shutdown

Some electrical and electronic appliances can be turned off at the plug without upsetting their programming.

Just by remembering to turn all your appliances off standby mode could save you up to £35 a year off your electricity bills.

Installing a TV standby shutdown plug will help towards this annual saving.

1. Plug your TV and other devices that do not need to be left on standby into any of the 4 controlled sockets for standby shutdown.
2. Plug the device requiring constant power into the "always on" socket.
3. Plug the extension lead into the mains wall socket and turn the wall socket ON.
4. Once the power is switched on there is a little indicator light above the green button which should start to flash. If this is not flashing, press and hold the green button until the light starts to flash.
5. Aim the TV remote at the infrared sensor and press and hold the power button until the light on the socket stops flashing and remains illuminated. The device has now recognised your TV remote. Ensure that any other devices connected are all on standby and wait for 30 seconds.

Please note:

The extension socket has 4 sockets for devices that do not need to be left on standby, for example, the TV, a DVD player, games console, or a VCR.

There is 1 socket for a device that requires constant power, for example, Sky, Virgin, BT, Talk Talk or Free View box.

The infrared sensor needs to be placed in front of the TV.

The extension socket must be plugged directly into a mains wall socket and not another extension socket.

6. Press the green button on the device. The light will now turn off.
7. **To turn ON the controlled sockets** - Aim your TV remote at the infrared sensor and the TV and press the power button until the TV turns on (you may now need to press the power button at least twice, once to power the shutdown socket and once for the TV). The light on the socket will illuminate indicating that the controlled sockets are re-powered.
8. **To turn OFF the controlled sockets** – Press the power button on your TV remote and your TV will go into standby. After 1 minute the standby shutdown will automatically turn off the power to all controlled sockets and the light on the socket will disappear.

Please note: the first time you switch the TV on after installing the shutdown socket, leave it running for at least 1 minute to ensure that the TV remains on. If the TV switches off on its own after 1 minute, turn the power off at the mains socket, switch it back on and then follow process steps 4 to 7 again.

Should you ever remove a plug or add a new plug to one of the controlled sockets the standby shutdown will need to be reset by following steps 4 to 7.
